Introduction

Security Reference Guides describe the Oracle Fusion Applications security reference implementation. This guide includes descriptions of all the predefined data that is included in the security reference implementation for an offering. The reference implementation can be customized to fit divergent enterprise requirements.

Security Reference Implementation

The Oracle Fusion Applications security approach supports a reference implementation that addresses common business security needs and consists of roles and policies.

Oracle Fusion Applications Security Reference Guides present the following information about the predefined security reference implementation.

- The abstract and job roles for an offering
- Duty roles and the role hierarchy for each job role and abstract role
- Privileges required to perform each duty defined by a duty role
- Data security policies for each job role, or abstract role
- Policies that protect personally identifiable information
- Data security policies on fact and dimension to ensure enforcement across tools and access methods

For an overview and detailed information about the Oracle Fusion Applications security approach, including an explanation of role types, enforcement, and how to implement and administer security for your deployment, see your product security guide.

How to Use this Security Reference Guide

Enterprises address needs specific to their organization by changing or extending the role definitions, role hierarchies, and data security policies of the reference implementation. You may also be subject to specific legal, regulatory, and industry requirements. You are solely responsible for your adherence to these requirements when assigning roles, privileges and granting access for your enterprise.

For each job or abstract role, review the duties, role hierarchy, and policies that it carries so you understand which users should be provisioned with the role, or which adjustments your enterprise requires before the role can be provisioned.

> **Note**:
> All information presented in this guide can be accessed in the various user interface pages of Oracle Fusion Applications provided for security setup, implementation customizations, and administration. The advantage of reviewing the security reference implementation as it is presented in this guide is that you can more easily compare and plan your customizations.

> **Tip**:
> From the entitlement of a role as expressed by privileges, you can deduce the function security enforced by a role. If your enterprise needs certain functions

removed from access by certain roles, change the data security policies or duties carried by the role.

Review the data security policies conferred on job roles by their inherited duty roles.

Review the privacy in effect for a job or abstract role based on its data security policies. Privacy is additionally protected by security components, as described in your product security guide.

> **Important**:
> As you make changes to the security reference implementation for an Oracle Fusion Applications deployment, the predefined implementation as delivered remains available. Upgrade and maintenance patches to the security reference implementation preserve your changes to the implementation.

Offering: Product Management

Configure how you create and manage items, catalogs and related processes, as well as the structures to support receipt accounting for purchased items, cost accounting for financial reporting, and product profitability management.

This guide describes the security reference implementation for the Product Management offering.

There is a set of common roles that are required to set up and administer an offering. For information about these common roles, see the *Oracle Fusion Applications Common Security Reference Guide*.
